

## Chapter 3: Country Data Tables

This chapter presents detailed data on the component variables used in constructing the EFW index for the 141 countries included in this study. For each country, we present the overall EFW index rating and the ranking of that country for the years 1980, 1985, 1990, 1995, 2000, 2001, 2002, 2003, 2004, and 2005. Like all the scores in the index, these are values out of 10; 10 is the highest possible score and zero (0) is the lowest. A higher score indicates a greater degree of economic freedom.

In the first column, titles in bold-face indicate the five areas of economic freedom that are combined to generate an overall score. The cells to their right give the scores (out of 10) for that particular area for each year.

Underneath each area title are the titles of the components that are combined to generate that particular area's score. Note that components 4Bi, 4Bii, 4Ei,

and 4Eii were not included in the tables due to limited space, but can be found in the full set of data available at <http://www.freetheworld.com>. In these rows are the scores (out of 10) for each year for which there are data available. In parentheses beside some scores are the actual data used to derive that particular component rating. The top row under the years shows the country's summary rating for each year and, in parentheses, its overall rank. The summary score is rounded to one decimal place for the country ranking.

A more complete description of each component, including the methodology used to calculate the ratings, can be found in the Appendix 1: Explanatory Notes and Data Sources (page 183).

Values are calculated back to 1970 but data for 1970 and 1975 are omitted from the tables due to limited space.

### Data Available to Researchers

The full data set, including all of the data published in this report as well as data omitted due to limited space, can be freely downloaded at <http://www.freetheworld.com>. If you are using the data across time periods, it would be better to use the chain-link series presented in Chapter 1, exhibit 1.5 (pages 20–22), and available at the website, for reasons outlined in that chapter. If you have any difficulties downloading the data, please feel free to contact us via e-mail to [freetheworld@fraserinstitute.ca](mailto:freetheworld@fraserinstitute.ca) or via telephone at +1.604.714.4563.

### Analytic software tool

Global Economic Software has developed a software research tool that aids the analysis of relationships between economic freedom and other factors. This tool incorporates all data from the *Economic Freedom of the World* and provides for collaborative exchange of data-sets created by other researchers. These extended data-sets are excellent for producing correlative graphs. The software is free of charge. More information is available at <http://www.freetheworld.com>.
